

High Technology Exploration

**4440 PGA Boulevard Suite 600,
Palm Beach Gardens, Florida 33410, USA**

GeoExploration - Capabilities

✓ **GeoExploration LLC helps in generating wealth by combining and assessing the multiple layers of information to reach to the final conclusion.**

✓ **Our Experts come from varied field of knowledge relevant to the mineral exploration assignments which makes us one of the unique presence in industry.**

- **Technology centric exploration**

- Remote sensing
- Structure focus mapping and sampling
- GIS – Exploration data integration
- GPS / DGPS survey
- Deep geophysics
- **Proprietary Cutting edge exploration technologies**
- CAGE-IN
- Gold proxy index
- Error free exploration databases
- Structural modelling

- **High resolution remote sensing interpretation in**

- Exploration planning
- Geological and Structural mapping
- Forest studies, land use mapping
- GIS integration and interpretation
- Prospect identification
- **Regional reconnaissance**
- **Field mapping, sampling**
- **Drill hole planning, logging, sampling**
- **Sample preparation**
- **3D geological modeling**
- **Compliant reports**
- **Reviving old Mines**

About GeoExploration

- Incorporated in Florida in 2011 for mineral exploration consulting
- Worked in 12 countries for various commodities like Au, Cu, U, COLTAN, Fe, Al, Diamonds
- Specialist in greenfield and brownfield Precious and Base Metals exploration – reconnaissance to resource estimate
- Specialist on high technology mineral exploration related geological services
- Undertakes technology development for exploration and mining ventures
- Involved in several very successful mineral exploration ventures globally

Global Footprint in Geological Work and QA-QC

14 Moz Au eq, Colombia.

Au-Cu porphyry attained market cap of over \$250M in less than 2 yrs

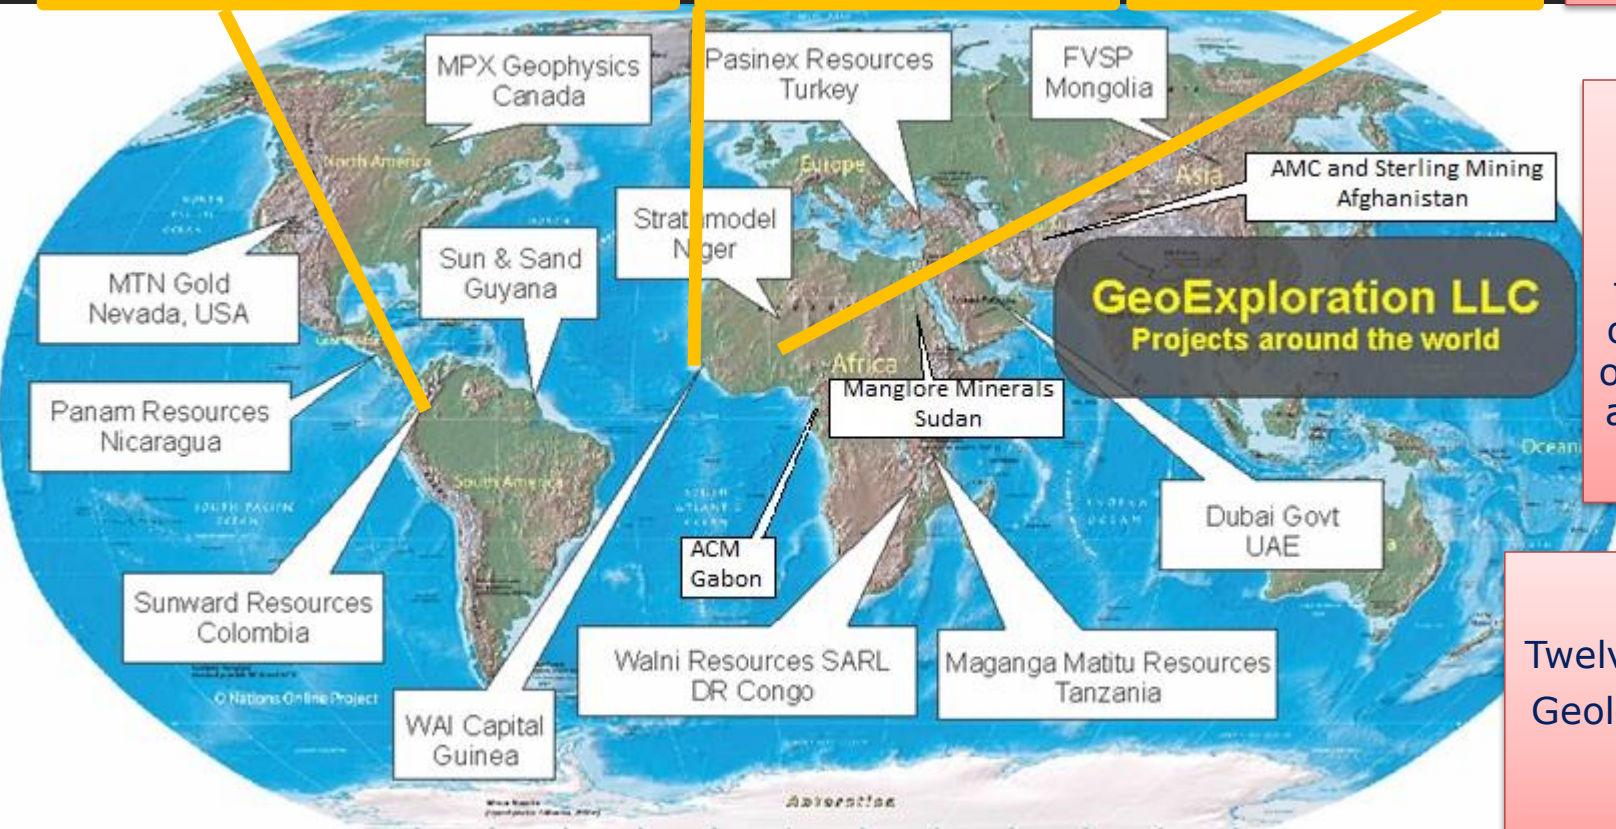

**Multi billion
tonne**

Iron Bauxite Laterite in

International clients, Geology focus, Developed QA-QC and data interpretation know how for geological applications

Remote sensing, prospect identification and prioritizing

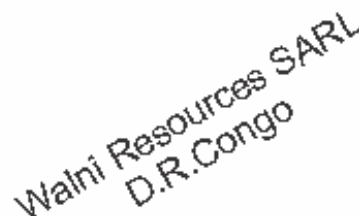

Data integration in GIS

Geology-geophysics data integration – CAGE-IN technology

Remote monitoring of mining activity and change monitoring using satellite data

Environmental monitoring using remote sensing

Software development for process automation

GeoExploration - Capabilities

Technology centric exploration

- *Remote sensing*
- *Structure focus mapping and sampling*
- *GIS – Exploration data integration*
- *GPS / DGPS survey*
- *Deep geophysics*

Proprietary Cutting edge exploration technologies:

- *CAGE-IN*
- *Gold proxy index*
- *Error free exploration databases*
- *Structural modelling*

Services for Government

- GIS integration of multiple databases
- Satellite data interpretation
 - Monitoring and surveillance of mining activity
 - Prospect identification for exploration
 - Land use mapping
 - Environmental change monitoring
- Geology - Geophysics data integration
CAGE-IN technologyChange monitoring on existing mines (remote monitoring)
- Integrating TAX data with mining database
- Support at international expositions and trade shows

Proprietary Spectral Classification Methodology

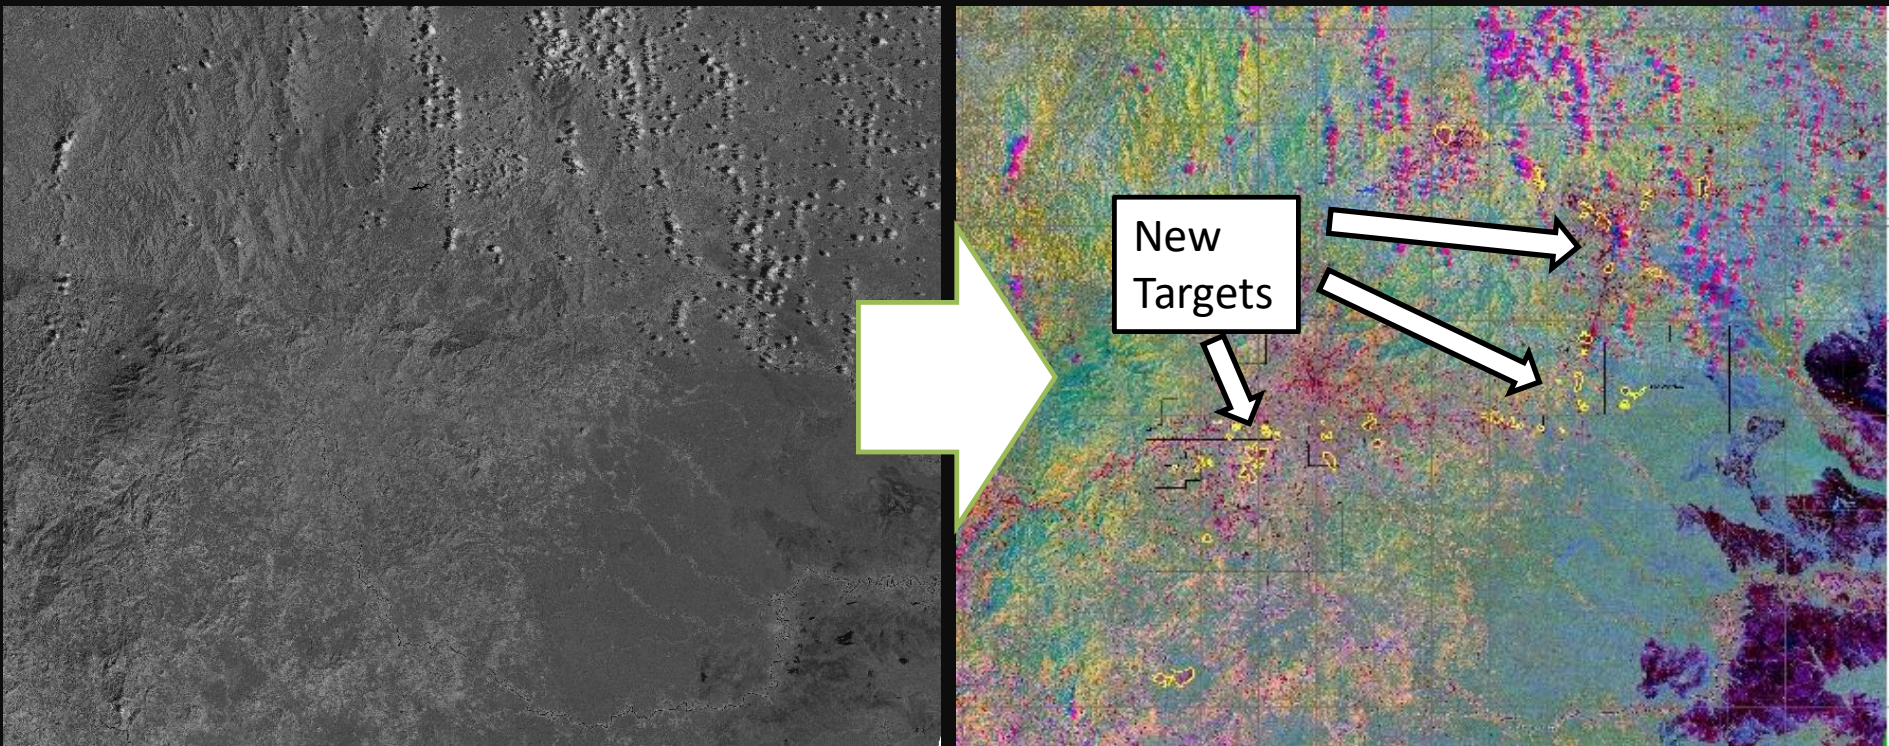

- Works for regional prospect identification as well as high resolution targeting
- Perfect for shallow mineralization with subtle superficial spectral signature
- Has been successful in delineating targets for Cu-Au Porphyry, hydrothermal and lateritic mineralization
- Works on the principle that mineralized bodies have identifiable spectral signatures and the geological anomalies associated with mineralization affect the surface bodies and vegetation.

Satellite – Prospect identification

- ✓ Proprietary image classification technology uses spectral signature to identify mineral prospects over very large areas
- ✓ Using our proprietary know-how of image classification we can identify the following on remote sensing imagery:
 - ✓ Potential mineral bearing areas within large prospects
 - ✓ Locate active mining areas and artisanal mining areas
 - ✓ Change in mining activities sites over time
 - ✓ Illegal mining activities or mining outside concession areas

Spectral Classification case study

Spectral classification methodology is able to identify multiple potential targets through identification and demarcation of geological domains, defining spectral signatures of mineralization in the target area, through detailed image analysis using band arithmetic, ratios, band combinations, PCA etc...

GeoExploration LLC - Expertise at a glance

Malachite boulder – DR Congo

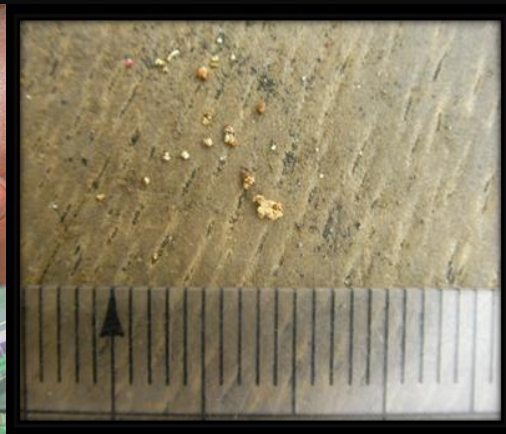

Finding Gold - Nicaragua

Drilling for Uranium - Niger

Reconnaissance for Gold - DRC

Gold nuggets - Colombia

SUCCESSFUL EXPLORATION – Multiple occurrences

- Au Cu Porphyry - 14 Moz Au eq – Colombia (2010-2012)
- Lateritic Iron Ore & Bauxite in Guinea, West Africa (2012-2013)
- Identification of hydrothermal gold targets in Nicaragua (2014)
- Identification of potential mineralization for alluvial gold in North Ontario (2017 – ongoing)
